

Conda installation

1. Check if Conda is installed:

- Open terminal (or Command Prompt on Windows).
- Type: `conda --version`
- If version number appears, Conda is installed.

2. If “command not found” or error, proceed to install Conda.

- Follow the instructions in the course video.
- **For Windows:** how to add conda to PATH - [Link](#)

3. Once done:

- Navigate to the folder with env.yaml file
- Run `conda env create -f env.yaml`
- Run `conda activate ml-systems`
- Run `pip install -r requirements.txt`
